Welcome to the United Association (UA) e-Resource Training Guide. Here you will find a one-stop resource for all of the e-Learning tools that are available to you for your use in the classroom, at home, or on the road, and to assign as homework for apprentices and journeyworkers. The purpose of the UA e-Resource Training Guide is to provide UA training centers with blended learning materials that accompany and or complement UA textbooks, Blackboard™ courses and JATC programs.

The United Association’s training system consists of numerous components, one of which is the UA Online Learning Resources online portal to your e-Learning resources. Here you will find our online Instructor Resource Library (IRL), Student Resource Library (SRL) and gateway to Washtenaw Community College’s Blackboard™ system.

By visiting www.uaolr.org you will find IRL subjects that complement current UA textbooks by providing instructors with:

- Instructional Guides
- PowerPoint® Presentations
- Interactive Illustrations
- Exams
- Answer Keys
- Quick Quizzes®
- Illustrated Glossaries
- Flash Cards
- Course Outlines
- Worksheets
- Media Resources
- Student Resource Libraries

The Student Resource Library is a digital resource available to students online. To access the Student Resource Library, students need to be enrolled by their local union training center. Here students will find a pared-down version of the IRL for studying, taking Quick Quizzes®, viewing Flash Cards and access to Videos and the new UAwebBooks™ if available for the selected title.

Next you will find the UA’s Blackboard™ courses. The UA’s Blackboard™ courses are an additional resource designed to complement UA textbooks and assist in the training of apprentices and journeyworkers. Certain Blackboard™ courses serve as a platform for virtual reality simulations in crane signaling, HVACR, and plumbing service work, with plans to expand into other subject matters.

Finally, this guide will cover two applications developed for the membership. The apps can be used via a smart phone or a tablet. The first is the UA Training App. Here you can access UA training news, videos, regional training schedule, and recruitment materials. The second app is meant to supplement UA textbooks with an augmented reality component.

Take a few moments to browse the e-Resource Training Guide, learn more about what is available to you, and how to access these resources.
UA Online Learning Resources (UAOLR)
The United Association’s training system consists of the Great Lakes Training Center, which is located in Ann Arbor, Michigan, and over 300 local union training centers across the United States and Canada.

The UA Training system provides common curricula for all five of the trades in the piping industry. Our system was designed to support and enhance training by sharing resources. These resources consist of various methods to train instructors by utilizing distance education, such as webinars, regional training courses at onsite locations, and internet-based classes using the Blackboard™ LMS and the UAOLR.

The UA Online Systems allow access for local union training centers to offer specialized courses, enabling instructors to provide training on specialized equipment.

UAOLR also provides a portal where our instructors can access and download e-Learning resources through our Instructor Resources Library (IRL). The IRL provides UA instructors with instructor’s guides to the UA’s textbooks, PowerPoint® presentations, exams, quizzes and multi-media training materials. UA Online Learning Resource site, offers a portal for UA students too—the Student Resources Library (SRL). Here a student can study and take quick quizzes, and sample exams to bring their skills up prior to taking an exam at their school. The SRL also allows students to access illustrated glossaries, flash cards, media and documents.

We are proud of the resources and tools we are able to provide UA instructors and apprentices through UA Online Learning Resources. Whether in a brick and mortar school or via distance education, UA is leading the way in training the piping industry professionals today.

How do I get started?
The Training Director/Coordinator must approve access to UA Online Learning Resources. All users, instructors, apprentices and students need to have a username and password to access the system.

The local union training center must have at least one designated local administrator to upload and manage their apprentices and students (Local Dashboard Access.) If you do not have access, contact your local training center.

Business Managers, please have your training director/coordinator contact UA Training Specialist Rod Jara by email at: rodj@uanet.org if you have any questions.
Instructor Resource Library (IRL)

- Material Available
- Descriptions
The Instructor Resource Library (IRL) is a portal where instructors can access and download e-Learning resources. Below are the course materials, descriptions and resources that are available to complement a textbook or are a stand alone course.

**2nd Year Apprentice—Understanding the Full Cost of an Hour of Labor**
This resource is vital in providing detailed explanations to apprentices of the full cost to the employer in putting a UA employee to work. It’s intended to benefit 2nd year or new UA Apprentices.

The resources provided in the **2nd Year Apprentice—Understanding the Full Cost of an Hour of Labor** Instructor’s Resource Library are:
- Instructor’s Lesson Plan
- Student Workbook
- PowerPoint® Presentations
- UA Curriculum Material
- Quick Quizz*
- Flash Cards
- Media
- Updates / Comments
- Online Resources

A video explaining all labor costs, such as insurance, taxes, fees, fuel, etc. is located in the Media tab.

**5th Year Apprentice—Understanding the Full Cost of an Hour of Labor**
This resource includes all items from the 2nd Year Apprentice—Understanding the Full Cost of an Hour of Labor resource, but with additional Bid Exercise Materials such as spreadsheet example bid calculations, plans, and items taken from the Foreman Training Course providing workshop documents for a fictional job bid. This resource is meant for 5th year apprentices, and helps provide a thorough understanding of Labor costs.

The resources provided in the **5th Year Apprentice—Understanding the Full Cost of an Hour of Labor** Instructor’s Resource Library are:
- Instructor’s Lesson Plan
- Student Workbook
- PowerPoint® Presentations
- UA Curriculum Material
- Quick Quizz*
- Flash Cards
- Bid Exercise Material
- Media
- Updates / Comments
- Online Resources

**Backflow Prevention Reference Manual**
This resource is designed to teach the basics of backflow prevention and cross-connection control. The user will be able to identify and test the wide variety of backflow preventers, and recognize the devices that cannot be tested. The tester will be able to identify backflow preventers that have failed and properly report those failures.

In its entirety, this resource will supply the information necessary to certify individuals as backflow prevention testers, certified repair technicians, and certified backflow prevention surveyors. Once you have completed training, you should be a competent member of this vital field of UA tradesmen, water suppliers, and engineers dedicated to “protecting the health of the nation.”

The resources provided in **Backflow Prevention Reference Manual** Instructor’s Resource Library are:
- Instructional Outlines
- PowerPoint® Presentations
- Interactive Illustrations
- Exams
- Answer Keys
- UA Curriculum Material
- Quick Quizzes*
- Illustrated Glossary
- Flash Cards
- Forms and Documents
- Media
- Updates / Comments
- Online Resources
Basic Electricity
This instructional guide describes the value and intended use of each component of the Basic Electricity theory training package. This guide also provides information about key elements that determine instructional program format, the instructional methods used by successful instructors, and detailed instructional plans that correspond to each chapter of the manual.

The resources provided in Basic Electricity Instructor's Resource Library are:

- Instructor's Guide
- Instructional Outlines
- PowerPoint® Presentations
- Interactive Illustrations
- Assignments
- Assessments
- Answer Keys
- UA Curriculum Material
- Quick Quizzes®
- Illustrated Glossary
- Flash Cards
- Forms and Documents
- Media
- Updates / Comments
- Online Resources

Building Controls
The Building Controls resource is a comprehensive guide to the operation of modern building control systems. The topics covered include an introduction to building control systems, control concepts, network data communications, and electrical system control devices and applications. Also covered are HVACR system energy sources, HVACR system control devices and applications, plumbing system control devices and applications, automated building operation, system integration, and trends in building automation.

The resources provided in the Building Controls Instructor's Resource Library are:

- Instructor's Guide
- Premium PowerPoint® Presentations
- Interactive Illustrations
- Assessments
- Answer Keys
- Building Controls UAwebBook
- Quick Quizzes®
- Illustrated Glossary
- Flash Cards
- Media
- Updates / Comments
- Online Resources

Drainage Systems
The Drainage Systems resource covers content related to the sanitary disposal of wastes, the efficient disposal of storm water, the use of proper wastewater disposal systems, and alternative water sources. Topics include an introduction to drainage, drainage system piping materials and supports, traps and fixture connections, sanitary drainage piping installation, vent systems, DWV sizing, storm drainage, sewers and sewage treatment, private sewage disposal systems, and alternate water source drainage systems.

The resources provided in the Drainage Systems Instructor's Resource Library are:

- Instructor's Guide
- Instructional Outlines
- PowerPoint® Presentations
- Interactive Illustrations
- Assessments
- Answer Keys
- UA Curriculum Material
- Quick Quizzes®
- Illustrated Glossary
- Flash Cards
- Forms and Documents
- Media
- Updates / Comments
- Online Resources
**e-Instruction Training**
The e-Instruction IRL is made up of three separate instructional components to help you set up and operate a Mobi or CPS and ExamView software too.

**Mobi:** The e-Instruction Mobi is best described as a wireless mouse that is also a Portable Interactive Whiteboard. The Mobi allows you to control your computer from anywhere in the classroom. It is operated wirelessly by an RF (Radio Frequency) Receiver plugged into a USB port of your computer. The receiver has a distance range of well over 50'. Whatever you can do sitting at your computer with your mouse you now will be able to do with the Mobi. You are no longer tied to the computer or to the front of the room. You can control anything on your computer wirelessly from any location in the classroom. When the Mobi is used with a projector, the picture image of your computer screen is projected. The Mobi works great on a white wall, a marker board or even another whiteboard.

**ExamView:** Streamline assessment from start to finish with ExamView Assessment Suite, a complete toolset in three seamless applications. Build comprehensive tests with Test Generator, administer tests with Test Player, and analyze results with Test Manager.

**CPS:** (Classroom Performance System) is software that leverages the use of student handheld devices (clickers) to garner feedback, boost engagement and interaction, and increase teacher effectiveness. CPS is used by millions of students and teachers in more than 500,000 classrooms. Keep students engaged and involved in class. Facilitate greater student-teacher interaction in a fun, dynamic learning environment that encourages class discussion and participation. Students who normally remain silent in class now answer every question with confidence.

**Energy Auditing Practices**
Where energy used to be treated as a limitless, cheap commodity, efforts now are concentrated on conservation, cost, efficiency, and environmental responsibility. Innovation in equipment and system controls has allowed us to improve efficiency without sacrificing comfort, health, or safety. These strategies, however, rely on skilled and knowledgeable technicians who must identify opportunities for increased efficiency and implement the most cost-effective retrofits. The Energy Auditing Practices manual will help train UA personnel in the entire energy auditing process.

The resources provided in the **Energy Auditing Practices** Instructor’s Resource Library are:

- Instructor’s Guide
- PowerPoint® Presentations
- Interactive Illustrations
- UA Curriculum Material
- Quick Quizzes®
- Illustrated Glossary
- Energy Auditing Practices UAwebBook
- Flash Cards
- Audit Forms
- Media
- Updates / Comments
- Online Resources

**Foreman Training Manual**
The Foreman Training Manual will serve potential foremen by instilling the principles of the UA Standard for Excellence, enabling him or her to effectively convey these principles on each and every job site. It takes the user through a realistic realm of the daily duties of a foreman, including chapters titled “Planning and Scheduling,” “Documentation and Record-Keeping,” “Managing, Measuring, and Improving Productivity,” “Change Orders,” and “Close-out.” It encompasses the behavioral mindsets of individuals on the job, and how to properly deal with each issue that may arise, inclusive in chapters titled “Image and Professionalism,” “Relationships,” and “Understanding and Resolving Conflict and the Art of Negotiation.” Each student will walk away with a complete knowledge of what is expected of a certified UA foreman.

The resources provided in the **Foreman Training Manual** Instructor’s Resource Library are:

- Quick Quizzes
HVACR and Refrigeration Systems
This training manual covers all aspects of residential and light commercial heating, ventilation, and air conditioning systems, focusing specifically on the operation, installation, service maintenance, and troubleshooting of these systems. The textbook covers heating and refrigeration fundamentals, psychrometrics, building mechanical systems, and electrical and electronic devices and controls. The textbook covers air-and water-source heat pump and chiller systems and includes 100 installation and 65 step-by-step service procedures. Energy efficiency practices, energy auditing, building commissioning, and retrofitting are covered as part of Energy Star and LEED certifications.

The resources provided in the HVACR and Refrigeration Systems Instructor’s Resource Library are:

- Instructor’s Guide
- PowerPoint® Presentations
- Interactive Illustrations
- Exams
- Answer Keys
- UA Curriculum Material
- HVAC and Refrigeration Systems UAwebBook
- Quick Quizzes*

- Online Resources

Medical Gas Certification
The resources provided in the Medical Gas Certification Instructor’s Resource Library highlight the code concepts required by medical gas system installers and are designed to serve as a basis for instruction. Like an artisan using specialized tools, an instructor uses many instructional tools, including personal experience, to further supplement this material.

The resources provided in the Medical Gas Certification Instructor’s Resource Library are:

- Instructor’s Guide
- Instructional Outline
- Course Outline
- PowerPoint® Presentations
- Interactive Illustrations
- UA Curriculum Material
- Quick Quizzes*
- Illustrated Glossary
- Flash Cards
- Form and Documents (Instructor Version)
- Forms and Documents
- Worksheets

Plumbing Service, Maintenance, and Repair
The installation of plumbing systems in new construction is performed by pipe trades journeymen and apprentices. Once these new piping systems and fixtures are installed, they must be maintained and serviced. Maintenance and service represent a high percentage of the total work performed in the plumbing industry. The Plumbing Service, Maintenance, and Repair manual covers 11 major plumbing topics and includes service and repair troubleshooting tables and internet resources.

The resources provided in the Plumbing Service, Maintenance, and Repair Instructor’s Resource Library are:

- Instructor’s Guide
- PowerPoint® Presentations
- Interactive Illustrations
- Chapter Exams
- Chapter Exam Answer Keys
- UA Curriculum Material
- Plumbing Service, Maintenance, and Repair UAwebBook

- Online Resources

Rigging
The Rigging resource provides an instructional platform to aid in the teaching of this essential skill. From differentiating between types of rope, to determining load weights, rigging instructors can use these tools to create more effective lesson plans and help their students succeed.

The resources provided in the Rigging Instructor’s Resource Library are:

- Instructor’s Guide
- Instructional Outlines
- PowerPoint® Presentations
- Interactive Illustrations
- Exams
- Assignments
- Answer Keys
- UA Curriculum Material
- Quick Quizzes*
- Illustrated Glossary

- Updates / Comments
- Online Resources

Solar Water Heating Systems: Fundamentals and Installation
This resource is a comprehensive guide to the installation of residential and light commercial domestic hot water and swimming pool solar water heating systems. The topics covered include solar thermal principles, system operation fundamentals, system design and sizing, site assessment, system startup and maintenance, system installation safety, and installation and service of system components, such as collectors, storage tanks, and operational control systems.

The resources provided in the Solar Water Heating Systems: Fundamentals and Installation Instructor’s Resource Library are:

- Instructor’s Guide
- Instructional Outlines
- PowerPoint® Presentations
- Interactive Illustrations
- Assessments
- Answer Keys
- UA Curriculum Material
- Solar Radiation Data Sheets
- Quick Quizzes*

**Sprinkler Fitter - Fire Pumps**
The installation of fire pumps in new and existing buildings are performed by UA Sprinkler Fitters and Apprentices per NFPA 20 requirements. Once these life safety components are installed and commissioned, these systems must be inspected, tested, maintained and serviced on a periodic bases as per NFPA 25. Maintenance and service represent a high percentage of the total work performed in the sprinkler industry. The Sprinkler Fitter – Fire Pump resource provides methods and guides to successfully perform inspection, testing maintenance and repair on fire pumps and their components to ensure these systems are performing as designed. The code requirements per NFPA 20 and NFPA 25 for installation, inspection, testing and maintenance for fire pumps along with requirements for proper PPE per NFPA 70E are addressed within this training resource.

The resources provided in the *Sprinkler Fitter* Instructor’s Resource Library are:

- Instructor’s Guide

**STAR Study Guides**
This resource is where you will find the study guides for the UA STAR certification exams.

The study guides are found in the Forms and Documentation tab. The resources are:

- UA STAR HVACR Commercial Refrigeration Study Guide
- UA STAR HVACR Residential/Light Commercial Study Guide
- UA STAR HVACR Study Guide 4-13-15
- UA STAR Pipefitter Study Guide
- UA STAR Plumbers Study Guide
- UA STAR Sprinkler Fitter Study Guide
Use and Care of Tools
The pipe trades industry continues to go through rapid changes in installation technologies and material development in all phases of the trade, including the residential, commercial, industrial, maintenance, and service industries. The type of materials used and the kinds of tools required for the installation of complex piping systems and equipment continue to evolve; however, many basic fundamentals still exist and apply to the industry today. This illustrated manual covers seven major manual and power tool topics, including safe use of tools, ladders and scaffold use, measuring and layout tools, hand tools, power tools, piping system joining tools, and specialty tools.

The resources provided in the Use and Care of Tools Instructor’s Resource Library are:

- Instructor’s Guide

Welding Practices and Procedures for the Pipe Trades
The Welding Practices and Procedures resource covers welding fundamentals and the proper processes, techniques, and procedures to become competent in the welding field. Topics include an introduction to welding, shielded metal arc welding (SMAW), gas tungsten arc welding (GTAW), gas metal arc welding (GMAW), other welding and joining processes, weld evaluation and testing, and welding technology.

The resources provided in the Welding Practices and Procedures for the Pipe Trades Instructor’s Resource Library are:

Student Resource Library (SRL)

- Material Available
The Student Resource Library (SRL) is a portal where students can access and download e-Learning resources. Below are the course materials and resources that are available to complement each textbook.

Students need to have a username and password to access the Student Resource Library. Access needs to be provided by the student’s local training center “Dashboard” Administrator.

Blackboard™

- Blackboard™ Request Procedure
- Blackboard™ Support
- Computer Requirements
- Required Computer Skills
- Blackboard™ Template Course Site Descriptions
- Interactive Modules
Blackboard™ is the home of the WCC-UA Blackboard™ LMS (Learning Management System). It is a secure site which requires a user name and password issued by Washtenaw Community College (WCC). This system is for online teaching of particular courses or it can also be used to supplement existing Apprenticeship Programs.

The Blackboard™ LMS (Learning Management System) is a web-based interactive learning environment (course management system) that supports learning and teaching in face-to-face, blended learning, and can be used as a supplemental resource for your local training classes too.

Instructors can post grades, information, assignments and interact with class participants by way of email, discussion board or Wikis. Students can get class materials, submit homework, and communicate with their instructors and classmates, all online.

UA Training Department has developed several “Blackboard™ Course Template Shells” for local unions to request and use as needed in their own local training programs.

There are two basic types of Blackboard™ Course Site Template Shells:

1. A fully populated course site which is designed to be used with the UA textbook for the course topic. The site includes syllabus, chapter units, assignments and assessments. All content may be customized to meet the local’s requirements for teaching the subject.

2. Course Sites hosting the Module for the specific topic. These include sites such as Crane Signaling, HVAC Troubleshooting, Industrial Rigging and others. These Blackboard™ course sites do not have any additional material. However, the local union Instructor may customize the site to include content for training or reinforcing the particular module topic.

Locals requesting a course shell should have a qualified Blackboard™ Instructor to provide a successful experience to the local and the students. UA OLR provides several training options for local instructors. One such option is the WCC Blackboard™ Introduction Course: http://www.wccnet.edu/academics/classes/online/introduction-class/

The UA provides the WCC Blackboard™ system at no additional cost to your local JATC as part of our partnership with Washtenaw Community College.

Blackboard™ Request Procedure

To request a Blackboard™ course you must have a UAnet account or an OLR (Online Learning Resource) account. The form can be found on the Home page of UANet under Quick Links and it can also be found on the UA IRL or SRL website in the navigation bar at the top of the page.
**WCC/UA Blackboard™ Help Desk Support**

UA Instructor Blackboard™ Live Support: 734-477-8908 (Normal working hours only)

24/7 Blackboard™ Support: 1-800-218-4341

Blackboard Online Student Help: [https://en-us.help.blackboard.com/Learn/Student](https://en-us.help.blackboard.com/Learn/Student)

Blackboard Online Instructor Help: [https://en-us.help.blackboard.com/Learn/Instructor](https://en-us.help.blackboard.com/Learn/Instructor)

**Computer Requirements for Blackboard™ Online Training**

You need a Windows PC or equivalent Mac computer to take online or blended classes. It should have a high-speed Internet connection, such as a DSL or cable connection.

The computer should have up-to-date versions of any of the following web browsers:

- Chrome
- Firefox
- Internet Explorer
- Safari

It also should have up-to-date versions of the following software:

- Adobe Acrobat Reader
- Adobe Flash Player
- Java
- Microsoft Office (or the ability to open Office documents in a program such as OpenOffice.org or Office Web Apps through Microsoft)

For the most current list of computer hardware and software requirements for WCC/UA Blackboard™, including version numbers, go to: [http://www.wccnet.edu/academics/classes/online/computer-requirements/](http://www.wccnet.edu/academics/classes/online/computer-requirements/).

**Computer Skills Required by Instructors and Participants**

To participate successfully in an online or blended class, you should be able to:

- Perform basic word processing.
- Use a web browser to visit websites and print web documents.
- Use email to send and receive messages, reply to messages, cut and paste text between messages, open attachments, and attach files to messages.

If your computer skills aren't at the level needed, UA and WCC offer classes where you can get up to speed on everything from word processing to using the web. Click this link to find out more on UA Training at WCC: [http://www.wccnet.edu/unions/ua/](http://www.wccnet.edu/unions/ua/).
Blackboard™ Template Course Site Descriptions

The UA Training Department has developed the following Blackboard™ course template shells for local instructors to request and use as needed in their own local training programs. The shells contain instructional content that follows UA course manuals and complements the material in the Instructor Resource Library. The materials are completely customizable; instructors may choose to edit or delete course content or add some of their own.

There are two types of courses available upon request: full course sites and interactive module course sites. The full course sites contain materials for an entire semester of course work, such as a syllabus, readings, and tests. The interactive module course sites only include virtual activities for student and instructor. They do not contain formal tests or assignments; however, instructors may add their own materials after receiving a copy of the course.

UA Full Course Sites

Basic Electricity Theory

The Basic Electricity Theory course provides information on electrical theory, devices, circuits, and electric measuring instruments as they relate to the installation of mechanical equipment and piping systems. Course participants will learn more about electrical safety, fundamentals of electricity and electric circuits, magnetism and electromagnetism, direct and alternating currents, circuits and transformers, inductance, and capacitance.

Instructors have access to a completely customizable course shell in Blackboard™, which contains materials that follow the Basic Electricity Theory course book. Readymade materials available in the shell include unit PowerPoints and assignments, multimedia relating course material to the pipe trades, several videos explaining electrical concepts and an interactive circuit builder.

Drainage

The Drainage course covers content related to the sanitary disposal of wastes, the efficient disposal of storm water, the use of proper wastewater disposal systems, and alternative water sources. Topics include an introduction to drainage, drainage system piping materials and supports, traps and fixture connections, sanitary drainage piping installation, vent systems, DWV sizing, storm drainage, sewers and sewage treatment, private sewage disposal systems, and alternate water source drainage systems.

Instructors have access to a completely customizable course shell in Blackboard™, which contains materials that follow the Drainage course book. Readymade online materials available in the shell include course curriculum, editable PowerPoint® lectures, quizzes, tests, and assignments related to course book content.

Drawing Interpretation and Plan Reading

The Drawing Interpretation and Plan Reading course is a must for learning the basic skills needed to interpret technical drawings and apply this knowledge on the job site. The course's chapters cover basic drawing, measuring tools, lettering skills, graphic symbols for pipe fittings, and valves, along with a complete set of building plans with specifications.

Instructors may request the Drawing Interpretation and Plan Reading course shell, which includes a course syllabus, learning modules with course objectives, to-do lists, drawing assignments, readings, and tests. The fully customizable material follows the Drawing Interpretation UA textbook.
Foreman Training
The Foreman Training course prepares students for the UA/MCAA Foreman certification examination. The course covers topics critical to the workplace and jobsite supervision: leadership, relationships, documentation, work plans and schedules, safety, subcontractors and supplier coordination, and productivity management.

Instructors may request a copy of the Foreman Training Blackboard™ course shell, which contains materials to help the student prepare for the certification exam: a course syllabus and unit modules with objectives, to-do lists, study materials, practice tests, and interactive learning activities. The fully customizable material follows the Foreman Training textbook.

Additional course and textbook resource information for instructors and students are explained in the IRL and SRL section of this catalog.

Hydronic Heating and Cooling
The continued use of hydronics in all types of buildings is of increasing importance for United Association pipe trades journeymen and apprentices. The Hydronic Heating and Cooling course covers a number of necessary topics about hydronic technologies: principles of hydronic heating and cooling, pumps, air management, piping materials and components, system layout, terminal units, controls, and system sizing.

Instructors may request a copy of the Hydronic Heating and Cooling Blackboard™ course shell, which includes a course syllabus, unit modules with objectives, to-do lists, and readings, and tests. The fully customizable material follows the Hydronic Heating and Cooling Textbook.

Additional course and textbook resource information for instructors and students are explained in the IRL and SRL section of this catalog.

Job Safety and Health
In Job Safety and Health apprentices learn about the occupational safety and health hazards that can exist on a jobsite. Topics include general safety and health provisions, correct use of devices and tools, Personal Protective Equipment (PPE), first aid, fire protection, electrical, material handling and lifting, proper welding and cutting, and occupational health and environmental controls.

Instructors have access to a completely customizable course shell in Blackboard™, which contains materials that follow the Job Safety and Health course book. Readymade online materials available in the shell include the Safety Training Module, trade specific 3D panoramic modules, editable PowerPoint® lectures, interactive multimedia covering general safety practices, and assignments related to course book content.

Math for the Trades Refresher
The Math for the Trades Refresher course is a self-paced course to refresh or assess a student’s knowledge in Basic High School Math. This refresher course consists of seven chapters that will review basic math skills. At the conclusion of the course, you should be ready to be successful in your future Math for the Trades courses.

Instructors have access to a completely customizable course shell online in Blackboard™, which contains Learning Units that have video examples of math problem solving, a pre-test and a post-test for evaluation purposes.

Plumbing Service, Maintenance, and Repair
The Plumbing Service, Maintenance, and Repair course includes descriptions and proper application of plumbing systems, components, and tools. Topics include plumbing tools, safety, systems, fixtures, fittings, and appliances.

The Plumbing Service course provides six Interactive 3D Virtual Troubleshooting scenarios where participants will determine the problem of a non-operational plumbing fixture or equipment.

Instructors have access to a completely customizable course shell in Blackboard™, which contains materials that follow the Plumbing Service, Maintenance, and Repair course book. Readymade online materials available in the shell include course curriculum, interactive multimedia activities, editable PowerPoint® lectures, quizzes, tests, and assignments related to course book content.
Related Science

The Related Science course familiarizes apprentices with the scientific principles and their applications in the various UA trades. The course covers the fundamental principles of water and steam, laws of liquids and gases, machines and how they work, piping system materials, and corrosion control and prevention.

Instructors have access to a completely customizable course shell in Blackboard™, which contains materials that follow the Related Science course book. Readymade online materials available in the shell include editable PowerPoint® lectures, multiple choice and short answer assignments, videos demonstrating scientific laws in action, and multimedia relating course material to the pipe trades.

Soldering and Brazing

The Soldering and Brazing course focuses on the joining methods of soldering and brazing. Apprentices learn about safety and safe work practices, soldering and brazing theory, types and uses of copper tube, uses of solders, brazing rod, and fluxes, joint preparation and assembly, heating equipment and tools, soldered and brazed joints, and performance tests for soldering and brazing.

Instructors have access to a completely customizable course shell online in Blackboard™, which contains materials that follow the Soldering and Brazing course book. Readymade online materials include editable PowerPoint® lectures, instructional videos about soldering and brazing components and processes, lab project blueprints, multiple choice and multimedia assignments, and tests.

UA STAR Certification Review

The UA STAR certification Review course site provides review material and practice tests for three UA STAR Certifications (HVACR, Steamfitting/Pipefitting, and Plumbing). Included are the NITC Candidate Bulletins along with links to the NITC exam information. Instructors may also add their own materials to the Blackboard™ course site.

Use and Care of Tools

The Use and Care of Tools course looks at the proper use and care of hand and power tools. Apprentices learn about proper tool use, tool care and maintenance, safety, ladders and scaffolds, measurement and layout tools, hand and power tools, pipe joining tools, and specialty tools.

Instructors have access to a completely customizable course shell online in Blackboard™, which contains materials that follow the Use and Care of Tools course book. Readymade online materials available in the shell include editable PowerPoint® lectures, multiple choice and multimedia assignments, and tests.

Welding Practices and Procedures for the Pipe Trades

The Welding Practices and Procedures course covers welding fundamentals and the proper processes, techniques, and procedures to become competent in the welding field. Topics include an introduction to welding, shielded metal arc welding (SMAW), gas tungsten arc welding (GTAW), gas metal arc welding (GMAW), other welding and joining processes, weld evaluation and testing, and welding technology.

Instructors have access to a completely customizable course shell in Blackboard™, which contains materials that follow the Welding Practices and Procedures course book. Readymade online materials available in the shell include course curriculum, interactive multimedia activities, editable PowerPoint® lectures, quizzes, tests, and assignments related to course book content.
UA Interactive Module Course Sites

Crane Signaling
The Crane Signaling course contains 3D interactive crane simulations for individual and classroom practice. Students may access the crane simulation for individual practice from a home computer. Instructors may use the interactive class simulation to lead group activities. During these activities students practice using or interpreting signals to control the actions of a virtual crane.
After requesting a local copy of this course site, you will need to contact the UA Training Department to acquire a software activation key.
Instructors may also add their own materials to the Blackboard™ course site.

Dry Systems
The Dry Systems course site provides the platform and resources for a local fire suppression dry system and its components.
Local instructors will have a completely customizable course shell in Blackboard™. Readymade materials available in the shell include multimedia designed to familiarize apprentices with the parts and installation process of a fire suppression dry system.

HVACR Troubleshooting
The HVACR Troubleshooting course provides six 3D Virtual Troubleshooting scenarios where participants will resolve electrical problems pre-configured on an air conditioning packaged rooftop unit.
The local instructor will have access to a completely customizable course shell in Blackboard™. Readymade materials available in the shell include six different HVACR troubleshooting simulations involving common electrical problems technicians encounter in the field. In order to successfully complete each scenario, apprentices must apply technical troubleshooting skills and good customer service knowledge.

Industrial Rigging
The Industrial Rigging course site provides an interactive rigging training module covering the proper and safe procedures of industrial rigging.
Local instructors have access to a completely customizable course shell in Blackboard™. Readymade materials available in the shell include the training module and detailed Industrial Rigging Program and Certification Procedures for the local’s Rigging Training program.

Welding
The Welding course site contains an interactive Visual Inspection activity. The activity asks students to identify different variations of welding defects and imperfections on 360-degree views of welding coupons. Instructors may also add their own materials to the course.
Virtual Reality Simulations

- Crane Signaling Simulation
- HVACR Troubleshooting Simulation
- UA Plumbing Service, Maintenance, and Repair Simulation
The UA Training Department has developed various virtual reality simulation training aids, two of which are now available via the Blackboard™ platform. A request for a Master Course will have to be made following the procedures used to request other Blackboard™ courses. See Blackboard™ section.

These courses engage a student in a virtual world using today’s gaming technology. Please read further to get a better understanding of how the course is used and what the student will experience once engaged in the training via virtual reality.

Virtual Crane Simulator

UA apprentices are currently taught how to signal crane operators and tested using various forms of instruction, from using live cranes to simulating a crane with a fishing pole. The UA has developed a 3D simulation system that will be used to test a person’s knowledge of crane signals without actually having a crane present.

This course was designed to facilitate teaching in the classroom for crane signals as well as a self-paced online activity. By providing apprentices or journeymen an engaging, highly illustrative tool to understand the signals and their outcomes, effective learning transference is expected.

A signal person (using hand or audible signals) will be able to give instructions to another person playing the role of crane operator. The results of the signal person’s instructions will be displayed on a computer screen, which may be projected onto a larger area if desired. The crane operator may be allowed to see the results of operations on a computer display or not, as determined by the situation.

An evaluator will be able to see the same display that the signal person sees and will be able to evaluate the signal person’s ability based on the results displayed. The crane operator will be given a keyboard to perform 10 to 12 crane signal commands. When instructed by the signal person, the crane operator will execute one of the programmed commands.

There are two different Virtual Crane Simulators, one is for the use of the instructor and is a software package that is downloaded. To get started with the instructors Virtual Crane Simulator application you will need to perform some basic setup procedures.

Download Application Files

First, download the application from the following URL:

http://www.itfinteractivelearningresources.com/ua_craneSimulator_install.exe

This installation file (.exe) is a self-contained file that will allow you to extract all necessary files to your local system.
Extract Application Files

After downloading the file to your computer, navigate to the directory where the file was downloaded. In this example, the file was downloaded to the user’s Desktop.

Double-click the "ua_craneSimulator_install.exe" file to start the extraction process. The current directory will be displayed as a default.

Enter the location to which you would like to install these files. Remember this location as you will need to navigate to this directory to start the application in the future.

Once the files have been extracted, you will see a folder with the following contents.

Running the Application

The first time you attempt to run the software you will be required to enter and validate a serial number. Be sure to have this number available before you begin.

Use one of the licenses you have been issued. Remember, each serial number can only be activated one (1) time. Double-click on the application named "ua_craneSimulator.exe."

If you are having problems activating your software or need an additional serial number, please contact Kiva Straser at kivas@uanet.org.
Select Screen Resolution
After running the application, you will be presented with an initial set of configuration options. This screen will allow you to select a desired screen resolution and graphics quality setting. Most likely you can accept the values that are selected by default. If your system seems to run the application poorly you can choose a lower screen resolution and lesser graphics quality to increase performance. Note that leaving the “Windowed” option unchecked will force the application to run Full Screen.

The second version of the Virtual Crane Simulator is available through Blackboard™ and is intended to be used as a self-paced teaching aid. Please see the Blackboard™ section of this catalog for description and procedure instruction on how to obtain a Master copy for use at your training center.

HVACR Virtual System Troubleshooting and UA Plumbing Service, Maintenance, and Repair
For today’s apprentices, game-based systems are becoming more prevalent in many aspects of their experiences.

For this training the apprentice will be informed at the start of the simulation that they are the repair technician tasked with keeping the HVACR system operational. They will be presented with various 3D simulation based activities (Service Calls) and will need to troubleshoot the system as problems arise to keep it running effectively.

This training module will be presented by a virtual instructor that will introduce the students to the simulation activities. The topics introduced are listed below:

1. Learning objectives of the training
2. Game Scenario – Who are you in this game?
3. Meters available in your toolbox
4. How to navigate within the virtual environment
5. How to interact with systems / equipment
6. Tools and tips for successfully working within the simulated environment

The service calls will be the actual “game-play” where the apprentices will be allowed to explore the work environments and own the learning experience. They will be given issues to solve and the tools to do so, but they will not be told how to do so step-by-step. Successfully troubleshooting the system will be achieved when the problem has been identified and the remedy performed. How the student “gets there” is under their control.

The environment for each service call will be as real-world as possible. If the trouble has ramifications that can be displayed in the environment they will be evident to the student. Meters are programmed via truth tables to display accurately, regardless of correct or incorrect placement or meter settings. If an apprentice performs a task during the service call that is dangerous they will be notified that they have done so but the system will not correct their actions. An example of this is placing meter leads across a 3-phase disconnect with the meter set to Ohms. The apprentice will be notified of the danger, but after that notification, the meter dial will be left on the Ohms setting. The student must rectify the situation.
UA Training App

- App Navigation
- Supporting Platforms
The UA's Training App was designed to meet the needs of the membership by providing a resource to the items listed below.

**Navigation Around the App**

- About the UA; an overview of the UA and what we are
- Instructor Training Program; the Instructor Training Program held by the UA's Training Department each August in Ann Arbor, Michigan utilizes the App as a platform providing attendees with a rich array of resources:
  - Class Schedule
  - Student Course Schedule
  - Assistance
  - Campus Maps
  - UA Videos
  - Brochure
  - Event Photos
  - Apprentice Hours; giving JATC's and apprentices a platform to submit on-the-job training hours (OJT)
  - Training Program Resources
    - Regional Training Catalog
      - Provides a list of the year's regional training classes offered to UA instructors, with locations and dates/times.
    - eResource Training Catalog
      - A one-stop resource guide for all of the e-Resources which are available to UA instructors, members and the general public for UA recruitment efforts
    - UA Bookstore
    - Recruitment
      - Recruitment Videos
      - Veterans VIP Site
      - Jobs Brochure
      - Executive Summary
    - UA Training News
    - Settings
      - Provides the user the choice of selecting Push Notifications within their UA geographic District or for all UA Districts.

The App can be downloaded by visiting your App Store and searching for “UA Training.”

**Supporting Platforms**

  - Apple iPhone
  - Apple iPad
  - Android phones
  - Android tablets
  - Windows phones
Interactive Curriculum App

- Apps Utilized
- Supporting Platforms
The UA’s Interactive Curriculum App was designed to provide additional teaching resources to UA instructors and UA students. The App takes pages of the textbooks and overlays Augmented Reality (AR) over live view world, utilizing the camera on the students phone or tablet. The AR appears as a three-dimensional image that seems to jump off the pages of the textbooks.

The Interactive Curriculum App can be downloaded by visiting your App Store and searching for “Interactive Curriculum” or scan the QR code below.

Current UA Textbooks Utilizing Augmented Reality

- Basic Electricity Theory
- Drawing Interpretation and Plan Reading
- HVAC and Refrigeration Systems
- Hydronic Heating and Cooling
- Plumbing: Service, Maintenance, and Repair
- Pumps
- Soldering and Brazing
- Use and Care of Tools
- 360° Video HVAC-R Scenario (New)
  This allows students to walk-through the first scenario of the HVAC-R training in a virtual world using 360° video technology. Using the Oculus Rift or the YouTube app on a mobile device, users can freely navigate video segments in a panoramic environment.

Supporting Platforms

- Apple
- Apple iPhone
- Apple iPad
- Android
- Android phones
- Android tablets

Apprentice Hours App
Apprentice Hours Application

The Apprentice Hours Application (or AHA) is a web-based application that eliminates the tedious paper-based systems currently used to track apprentice work hours. It will allow apprentices to log their job hours, allow instructors, journeymen or employers to review and modify time entry information, and allow users to generate reports for compliance. Training Directors/Coordinators register at http://uaworkhoursapp.com. Questions about registration? Contact Kiva Straser at kivas@uanet.org or (410) 269-2000.
Recruitment Materials

- Recruitment Videos
- Customizable Videos
- Recruitment Materials
- UA Training E-News
Below you will find a list of recruitment/training videos produced by the UA’s International Training Fund. The recruitment videos range from the basic all pipe trades recruitment video to individual craft videos i.e. Fire Sprinkler Fitter, Plumber, etc. plus videos that are targeted to the parents and counselors of possible applicants.

The list of videos below comes with a short description of the video. Click on the video title (hyperlink) to view in your internet browser. Please feel free to use the videos for your outreach efforts and feel free to link them from your own JATC website too.

**General Recruitment Videos**

**UA: The Best Training, The Best Jobs**
A general pipe trades recruitment video

**UA: The Right Fit**
A general pipe trades recruitment video

**Women of the United Association**
A recruitment video for attracting women in the UA

**Standard for Safety**
The United Association’s promotion of safety standards

**Craft Specific UA Career Recruitment Videos - Shortened Versions (minute versions)**

**HVACR**

**You See More: HVACR Trailer**
A short introductory video for the You See More-HVACR Recruitment video

**Plumber**

**You See More: Plumbing Trailer**
A short introductory video for the You See More-Plumbing Recruitment video

**Sprinkler Fitter**

**Sprinkler Fitter Salary: Career Benefits as a UA Sprinkler Fitter**
A short video highlighting UA sprinkler career benefits

**General Recruitment Trades Videos**

**Pipe Fitters**
A general pipe trades recruitment video focusing on the pipe fitting trade

**You See More: Plumbing**
A general pipe trades recruitment video focusing on the plumbing trade

**Sprinkler Fitter Jobs: Learn About a Career as a UA Sprinkler Fitter**
A general pipe trades recruitment video focusing on the sprinkler fitting trade

**Welder**
A general pipe trades recruitment video focusing on the pipe welding trade

**You See More: HVACR Recruitment**
Recruitment video focusing on the recruitment of HVACR service technicians
Recruitment Videos for Parents, Counselors and Students

**UA: The Right Fit (information for counselors)**
A general pipe trades recruitment and informational video targeting school counselors of students

**UA: The Right Fit (information for parents)**
A general pipe trades recruitment and informational video targeting parents

**UA: The Right Fit (information for students)**
A general pipe trades recruitment and informational video targeting students

**Apprentice Plumbing Careers: Training Opportunities with the UA**
A plumbing specific video targeting school counselors of students

**Sprinkler Fitter Apprenticeship: Career and Trade Training in the UA**
A sprinkler fitter specific video targeting school counselors of students

**HVACR Classes & Training: How to Start a Career in the HVACR Industry**
An HVACR specific video targeting parents/teachers/counselors/students

**Help Students Find a Career as a HVACR Service Technician (information for parents/teachers/counselors)**
Recruitment video focusing on the recruitment of HVACR service technicians targeting parents/teachers/counselors
Customizable Videos

The International Training Fund has committed to providing quality recruitment material to our local training programs. As part of this effort, the ITF has prepared a set of customizable videos that are designed to be utilized by local training programs as part of their outreach and recruitment. These videos are designed to function not only as a streaming video on a local training program website but also as commercials on local TV channels. Choose from the United Association’s International Training Fund’s customizable 30 or 60 second commercial television/website spots listed below. The ITF will cover the cost of customizing the ending of the video to contain your local training program information. Any other changes requested will be the responsibility of the local to cover the cost. Click on the link below to request your video.

Choice of Video Examples
“Alumni: Earn and Learn for Free” 30 Second Commercial
“Alumni: Earn and Learn for Free” 60 Second Commercial
“Apprenticeship the Other 4 Year Degree” 60 Second Commercial

Screen shot of video ending with your information added here!

Complete the form at the following link to receive a youtube link and downloadable file for your local union’s personalized video. http://www.123contactform.com/form-1606276/TVWeb-Spot-Request-Form

Questions concerning custom videos? Contact Kiva Straser at kivas@uanet.org or call (410) 269-2000.
Customizable Brochures and Push Cards for Recruiting Events

The International Training Fund has committed to providing quality recruitment material to our local training programs. As part of this effort, the ITF has prepared various printed recruitment material that is designed to be utilized by local training programs as part of their outreach and recruitment. This material is customizable allowing for UA local training programs to customize it to fit your local recruitment and outreach needs. Training Directors/Coordinators may visit the United Association’s International Training Fund’s “JOIN” website to create an account and order customized trade specific materials. These materials are being provided by the ITF at no cost to your training center up to a specified amount. Push cards and tri-fold brochures are available in quantities of up to 500 and Executive Summaries are available in quantities of up to 50 at no charge. Any quantities requested above these amounts will be the responsibility of the local training program. Please note that the “You See More Executive Summary” specific for HVACR, Fire Protection and Plumbing are not customizable.

To request access to this site to order material, Training Directors/Coordinators please request access by clicking on the link: www.UAjoin.org.

Questions on ordering recruitment brochures and push cards? Contact Kiva Straser at kivas@uanet.org or call (410) 269-2000.

UA Training E-News

The International Training Fund periodically provides short e-videos highlighting training or special events going on within the piping industry. A list of these videos is provided below.

Medical Gas (December 2014)
Short bi-monthly new release video focusing on a medical gas industry conference and how the UA training department is meeting the training needs of that industry

Trends in Training Welders (February 2015)
Short bi-monthly new release video focusing on a pipe welder industry conference and how the UA training department is meeting the training needs of that industry

Auto Desk (March 2015)
Short bi-monthly new release video focusing on the 2015 Auto Desk conference and how the UA training department is meeting the training needs of new technology presented at the conference

MCAA Safety Director’s Conference (June 2015)
Short bi-monthly new release video focusing on a safety director’s conference and how the UA training department is meeting the training needs for safety in the industry

HVACR (August 2015)
Short bi-monthly new release video focusing on an HVACR industry conference and how the UA training department is meeting the training needs of that industry

NFPA Conference (October 2015)
Short bi-monthly new release video focusing on an NFPA Conference and how the UA training department is meeting the training needs of that industry

ASSE Conference (May 2016)
Short bi-monthly new release video focusing on an ASSE Conference and how the UA training department is meeting the training needs of that industry

VIP Program (July 2016)
Short bi-monthly new release video focusing on the Veterans in Piping Program and how the UA training department is meeting the training needs of the men and women who serve our country
